

# **Compose Input: A Demonstration of Text Input and Validation with Android Compose**

Name:Avila Aagnes.L  
Reg.No:710422104006

# Description

"**Compose Input: A Demonstration of Text Input and Validation with Android Compose**" refers to showcasing how to implement and manage user input fields using **Jetpack Compose**, Google's modern toolkit for building native UI in Android applications. This topic typically includes demonstrating how to:

## 1. Create Text Input Fields

- Use the `TextField` or `OutlinedTextField` components to allow users to enter text.
- Customize these fields with labels, placeholders, and icons.

## 2. Handle State and Input Changes

- Utilize `remember` and `mutableStateOf` to manage the state of input fields.
- Update UI dynamically as the user types.

## 3. Implement Validation

- Validate user inputs such as email formats, passwords, or other criteria.
- Display error messages or feedback directly below the input field if validation fails.

## 4. Enhance Usability

- Add features like:
  - Input masking (e.g., phone numbers or credit card formatting).
  - Keyboard actions to move between fields or submit forms.
  - Clear buttons or focus management for user convenience.

## 5. Styling and Customization

- Apply custom themes and styles to input fields.
- Adjust colors, fonts, and dimensions to fit the app's design.
